RESCRIPTION: Ist strand cDNA was primed with an oligo(dT) primer for greater for a synthesized with specific strand size selection was synthesized using specific 5'and 3' primers and amplified by PCR. The PCR product was digested with SiII and size selection was performed to exclude fragments (1.5kb. The SIII digested PCR product was cloned into distinct DraIII sites of pMEIBS-FL3. XhoI sites just outside the DraIII sites can be used to isolate the CDNA insert. Libraries were constructed by Sugano et al.(University of Tokyo, Institute, of Medical Science). Custom primer used for sequencing (5' end primer [CGACCTGCAGCTCGAGCACAA]).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Infectious Diseases, Division of Genetic Resources: 23-1, Toyama I-chome, Shinjuku-ku, Tokyo 162-8640, Japan (E-mall:khashlenh.go.jp, ORL:http://www.nlh.go.jp/yoken/genebank/.Tel:81-3-5285-1111(ex.2120), Fax:81-3-5285-11181) URL: http://www.nlh.go.jp/yoken/genebank/.URL:

                                                                     * NOTE: This is a 'working draft' sequence. It currently
* consists of 48 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
1059: contig of 1059 bp in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (29-APR-2000) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Sep 5, 2000 this sequence version replaced gi:7960325.
All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo sapiens

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB DB
